ARTHUR ALBEFARO

Full-Stack Developer · Backend, Automation & Systems Integration

Full-stack developer across two professional fronts: automation and systems integration at Overload Mkt, where my automations removed ~20 hours of manual work per week, and a C#/.NET and Angular platform serving 113,000+ Revit materials on AWS in production at Arcabee. Core stack: TypeScript/NestJS, React/Next.js, Python and PostgreSQL.

PROFESSIONAL EXPERIENCE

Full-Stack Developer — AI & Automation

Overload Mkt · April 2025 — Present

- Automated CRM, onboarding, offboarding and operational routines, removing approximately 20 hours of manual work per week.
- Built the agency's internal platform with TypeScript (NestJS) on the backend and React/Next.js on the frontend, including operational, commercial and sales dashboards with performance rankings.
- Integrated the platform with GoHighLevel, Notion and external REST APIs, covering CSAT flows and processing dozens of records per day.
- Developed AI-powered support and automation solutions using the OpenAI, Anthropic (Claude) and Gemini APIs.
- Maintain backend services in TypeScript and Python: data extraction, transformation and normalization, data modelling, endpoint documentation and deployment on Linux.

Full-Stack Developer

Arcabee · 2025 — Present

- Development of a platform serving 113,000+ Revit materials and families, with an Angular frontend, an ASP.NET (C#/.NET) API and a content ingestion pipeline.
- Development of a Revit plugin in C# and .NET, integrated with the platform's content.
- Production infrastructure on AWS (S3, EC2, Route 53) and Cloudflare R2, with part of the services on a VPS.
- Deployment with Docker and a GitHub-based CI/CD pipeline.

PROJECTS

CRM → Notion Automation

TypeScript · NestJS · Node.js · REST APIs · GoHighLevel · Notion API

- Integration between GoHighLevel and Notion with a full extract-transform-load (ETL) pipeline over their APIs.
- Normalization of unstandardized CRM data, with duplicate control and per-record error isolation.

RSVP Application

React · Next.js · Freelance

- Invitation and RSVP application built with React and Next.js.

EDUCATION

BSc in Computer Science

Universidade de Vila Velha (UVV), Brazil
In progress · expected 2029

TECHNICAL SKILLS

BACKEND	TypeScript (NestJS), Node.js, Python (FastAPI), C# (.NET/ASP.NET), REST APIs
FRONTEND	React / Next.js, Angular, HTML5, CSS3
DATA	PostgreSQL, SQL, MySQL, MongoDB, Redis, SQLite, PL/SQL
CLOUD & INFRA	AWS (S3, EC2, Route 53), Cloudflare R2, VPS, Docker, CI/CD, Linux
AI & AUTOMATION	OpenAI, Claude and Gemini APIs · GoHighLevel · Notion
ADDITIONAL	Java, PHP, Laravel, Git, GitHub
